It then builds on the foundational knowledge and helps students develop clinical decision-making skills. Physical therapy students and some new graduates often struggle with this decision-making process and answering the why questions. This text provides the reader with fundamental, step-by-step approach to the subjective and objective portions of the examination process for a broad spectrum of patients within the musculoskeletal, neuromuscular, integumentary, and cardiopulmonary realms (according to the Guide to Physical Therapist Practice). Ample rationale is provided for why a test/measure would or would not be selected based on the patient's diagnosis or presentation.
