World-building Stephen Lee Gillett 1996 With Stephen Gillett's help, you'll be on solid ground, no matter what kinds of worlds you create for your science fiction. World-Building explains science to help you make your fiction plausible. You'll give your worlds the pull of gravity, aware of the effects on inhabitants and the planets themselves. Mix elements and build planets with chemically credible, geologically accurate characteristics - and anomalies - that affect those who live there. Create planetary "engines," convincing atmospheres and fact-based weather patterns. Colonize a truly weird world: ancient Earth. Explore our neighboring planets and their satellites for SF possibilities. Light and heat your landscapes with the right types of stars. See how things might be on a "chloroxygen" world and other hypothetical places. In this book, you'll follow calculations, read tables, view diagrams, learn what forces are at work in the universe, and see how you can harness them to give realism to the fantasy in your storytelling.

Through Struggle, the Stars John J. Lumpkin 2011-08-26 In 2139, a network of artificial wormholes has allowed humanity to reach nearby stars, where nations fiercely compete to settle new colony worlds. War is imminent between Earth's top powers, China and Japan, for reasons that no one entirely understands. Neil Mercer, a freshly commissioned officer in the United States Space Force, is assigned to shepherd a senior spy on a covert mission that risks drawing America into the conflict. In a story featuring high adventure, interstellar intrigue and some of the most scientifically realistic space combat depicted in fiction, Neil and his comrades must face difficult questions about duty, citizenship and national interest as they struggle to discover why the war threatens to engulf every nation on Earth. Recommended for fans of Tom Clancy, Patrick O'Brian, and Robert Heinlein. Also available as an e-book at www.thehumanreach.net. "It's all great, good fun ... " -- Don Sakers, Analog Science Fiction and Fact, May 2012 "... a fine and fast-paced read, very much recommended." -- Paul T. Vogel, The Midwest Book Review, January 2012

En route vers les étoiles Jean-Pierre Urbain 2016-09-29T00:00:00-04:00

C'était l'Amérique, puis la Lune, ce sera bientôt Mars et même les satellites de Jupiter. L'espèce humaine n'arrête pas d'aller de conquête en conquête pour élargir ses horizons. D'ici quelques centaines d'années, le système solaire pourrait être sillonné de navettes qui vont ravitailler des colonies établies un peu partout sur les astres voisins. Et après? Il n'y a pas de limites à l'imagination. Ce livre original raconte aux jeunes de 10 ans et plus, comment pourrait se vivre le grand saut hors du système solaire. Un voyage - sans retour - qui va durer des siècles à bord d'un vaisseau spatial semblable à une

immense noix de Grenoble. Rêve? Fabulation? En route vers les étoiles nous rappelle qu'un des principaux moteurs de la conquête spatiale est la créativité. Car c'est de cette façon que commencent les grandes aventures. Ainsi, les jeunes lecteurs sont invités à planifier, à leur façon, ce voyage dans l'espace en se faisant tour à tour architectes, urbanistes, ingénieurs, psychologues, philosophes ou encore horticulteurs. Cet ouvrage mi-pédagogique mi-visionnaire initie aussi les lecteurs à la fabrication de maquettes. Comme le font toutes les agences spatiales du monde, il est utile de confectionner des maquettes de vaisseaux ou de bases spatiales avant de réaliser des projets de mission. Prêt pour le départ? Voici votre premier passeport pour les étoiles! Destination: Zarmina, une planète située à 20,3 années-lumière de la Terre. Nanotechnology and the Resource Fallacy Stephen L. Gillett 2018-03-22 Dwindling global supplies of conventional energy and materials resources are widely thought to severely constrain, or even render impossible, a "first-world" lifestyle for the bulk of Earth's inhabitants. This bleak prospect, however, is wrong. Current energy resources are used grotesquely inefficiently as heat ("fuels," after all, are "burned"), so that well over half of the energy is simply dissipated into the environment. In turn, conventional materials resources, particularly of metals, are geologically anomalous deposits that also are typically processed by the prodigious application of raw heat. Simultaneously, rising levels of pollution worldwide are a challenge to remediate as they require the extraction of pollutants at low concentration. Nanotechnology, the structuring of matter at near-molecular scales, offers the prospect of solving all these problems at a stroke. Non-thermal use of energy, in broad emulation of what organisms do already, will not only lead to more efficient use but make practical diffuse sources such as sunlight. Pollution control and resource extraction become two aspects of the same fundamental problem, the low-energy extraction of particular substances from an arbitrary background of

other substances, and this also is in emulation of what biosystems carry out already. This book sketches out approaches both for the efficient, non-thermal use of energy and the molecular extraction of solutes, primarily from aqueous solution, for purification, pollution control, and resource extraction. Some long-term implications for resource demand are also noted. In particular, defect-free fabrication at the molecular level is ultimately likely to make structural metals obsolete.

Faint Echoes, Distant Stars Ben Bova 2009-10-13 Our neighboring planets may have the answer to this question. Scientists have already identified ice caps on Mars and what appear to be enormous oceans underneath the ice of Jupiter's moons. The atmosphere on Venus appeared harsh and insupportable of life, composed of a toxic atmosphere and oceans of acid -- until scientists concluded that Earth's atmosphere was eerily similar billions of years ago. An extraterrestrial colony, in some form, may already exist, just awaiting discovery. But the greatest impediment to such an important scientific discovery may not be technological, but political. No scientific endeavor can be launched without a budget, and matters of money are within the arena of politicians. Dr. Ben Bova explores some of the key players and the arguments waged in a debate of both scientific and cultural priorities, showing the emotions, the controversy, and the egos involved in arguably the most

important scientific pursuit ever begun.

Off the Main Sequence Tom Easton 2006-10-01 Tom Easton has served as the monthly book review columnist for Analog Science Fiction for almost three decades, having contributed during that span many hundreds of columns and over a million words of penetrating criticism on the best literature that science fiction has to offer. His reviews have been celebrated for their wit, humor, readability, knowledge, and incisiveness. His love of literature, particularly fantastic literature, is everywhere evident in his essays. Easton has ever been willing to cover small presses, obscure authors, and unusual publications, being the only major critic in the field to do so on a regular basis. He seems to delight in finding the rare gem among the backwaters of the publishing field. "A reviewer's job," he says, "is not to judge books for the ages, but to tell readers enough about a book to give them some idea of whether they would enjoy it." And this he does admirably, whether he's discussing the works of the great writers in the field, or touching upon the least amongst them. This companion volume to "Periodic Stars" (Borgo/Wildside) collects another 250 of Easton's best reviews from the last fifteen years of "The Reference Library." No one does it better, and no other guide provides such lengthy or discerning commentary on the best SF works of recent times. Complete with Introduction and detailed Index.

Practices of Speculation Jeanne Cortiel 2020-12-31 This volume offers innovative ways to think about speculation at a time when anticipation of catastrophe in an apocalyptic mode is the order of the day and shapes public discourse on a global scale. It maps an interdisciplinary field of investigation: the chapters interrogate hegemonic ways of shaping the present through investments in the future, while also looking at speculative practices that reveal transformative potential. The twelve contributions explore concrete instances of envisioning the open unknown and affirmative speculative potentials in history, literature, comics, computer games, mold research, ecosystem science and artistic practice.

Building Imaginary Worlds Mark J.P. Wolf 2014-03-14 Mark J.P. Wolf's study of imaginary worlds theorizes world-building within and across media, including literature, comics, film, radio, television, board games, video games, the Internet, and more. Building Imaginary Worlds departs from prior approaches to imaginary worlds that focused mainly on narrative, medium, or genre, and instead considers imaginary worlds as dynamic entities in and of themselves. Wolf argues that imaginary worlds—which are often transnarrative, transmedial, and transauthorial in nature—are compelling objects of inquiry for Media Studies. Chapters touch on: a theoretical analysis of how world-building extends beyond storytelling, the engagement of the audience, and the way worlds are conceptualized and experienced a history of imaginary worlds that follows their development over three millennia from the fictional islands of Homer's *Odyssey* to the present internarrative theory examining how narratives set in the same world can interact and relate to one another an examination of transmedial growth and adaptation, and what happens when worlds make the jump between media an analysis of the transauthorial nature of imaginary worlds, the resulting concentric circles of authorship, and related topics of canonicity, participatory worlds, and subcreation's relationship with divine Creation Building Imaginary Worlds also provides the scholar of imaginary worlds with a glossary of terms and a detailed timeline that spans three millennia and more than 1,400 imaginary worlds, listing their names, creators, and the works in which they first appeared.

The Mammoth Book of Extreme Science Fiction Mike Ashley 2010-07-31 Here are 25 stories of science fiction that push the envelope, by the biggest names in an emerging new crop of high-tech futuristic SF - including Charles Stross, Robert Reed, Alastair Reynolds, Peter Hamilton and Neal Asher. High-tech SF has made a significant comeback in the last decade, as bestselling authors successfully blend the super-science of 'hard science fiction' with real characters in an understandable scenario. It is perhaps a reflection of how technologically controlled our world is that readers increasingly look for science fiction that considers the fates of mankind as a result of increasing scientific domination. This anthology brings together the most extreme examples of the new high-tech, far-future science fiction, pushing the limits way beyond normal boundaries. The stories include: "A Perpetual War Fought Within a Cosmic String", "A Weapon That Could Destroy the Universe", "A Machine That Detects Alternate Worlds and Creates a Choice of Christs", "An Immortal Dead Man Sent To The End of the Universe", "Murder in Virtual Reality", "A Spaceship So Large That There is An Entire Planetary System Within It", and "An Analytical Engine At The End of Time", and "Encountering the Untouchable."

Aliens & Alien Societies Stanley Schmidt 2011-05-30 "There are more things in heaven and earth, Horatio, than are dreamt of in your philosophy." - Hamlet, William Shakespeare Stanley Schmidt guides you toward a better understanding of our universe to create beings who will live in your science fiction. Aliens and Alien Societies explains science to help you make your fiction plausible. You'll avoid bringing characters from solar systems unlikely to support life. Discover the galaxy's vastness and imagine the technology needed to cross it. Put biochemistry on your side to put viable creatures on your pages. Learn how engineering shapes life and why this suggests that intelligent inhabitants of other planets might have similarities to humans. Develop well-founded cultures and logical languages. Introduce aliens to people or other aliens. Portray them as individuals, true to their species. In this book, possibilities abound and lines between knowledge and conjecture blur enthrallingly. Aliens and Alien Societies is thoughtful, clear and utterly fascinating. It is filled with facts to help you write believable fictions about the things in heaven and earth.

Cinema As a Worldbuilding Machine in the Digital Era Alain Boillat 2022-02-15

This essay examines the primacy of worldbuilding in the age of CGI, transmedia practices and "high concept" fiction by studying the principles that govern the creation of a multiverse in a wide range of film and TV productions. Emphasis is placed on Hollywood sci-fi movies and their on-screen representation of imaginary machines that mirror the film medium, following in the tradition of Philip K. Dick's writings and the cyberpunk culture. A typology of worlds is established, as well as a number of analytical tools for assessing the impact of the coexistence of two or more worlds on the narrative structure, the style (uses of color, editing practices), the generic affiliation (or hybridity), the seriality and the discourse produced by a given film (particularly in fictions linked to post-9/11 fantasies). Among the various titles examined, the reader is offered a detailed analysis of the Resident Evil film series, Total Recall and its remake, Dark City, the Matrix trilogy, Avatar, Source Code and other time-loop films, TRON and its sequel, Christopher Nolan's Tenet, and several TV shows - most notably HBO's Westworld, but also Sliders, Lost, Fringe and Counterpart.

Het bottenseizoen Samantha Shannon 2013-08-28 De nieuwe sensatie uit Engeland: Het bottenseizoen, dat in 2012 al wereldnieuws werd toen de destijds twintigjarige auteur, Samantha Shannon, een recordvoorschat kreeg van Bloomsbury, de uitgever van Harry Potter. Het is het jaar 2056. Scion, dan de touwtjes in handen, beschouwt helderziendheid als een plaag en wil alle zieners uitroeien. De negentienjarige Paige Mahoney werkt in de Londense onderwereld, in de wijk Seven Dials, voor een mime-lord genaamd Jaxon Hall, een criminele helderziende. Paige is een droomdoler, een helderziende die anderen via droombeelden kan voelen. In het Scion van 2056 pleegt ze alleen door te ademen al hoogverraad. Het regent op de dag die haar leven zal veranderen. Ze wordt aangevallen, gekidnapt en getransporteerd naar Oxford, de stad die al tweehonderd jaar gezocht wordt. Daar ontmoet ze Warden, een Refaiet met een donkere huid en grote gele ogen. Hij is het mooiste en meest beangstigende wat ze ooit heeft gezien - en hij zal haar uiteindelijk beschermen. Het bottenseizoen is een verrassende combinatie van een unieke literaire stem, een volledig bedacht verhaal in een bloedstollend spannende parallelle wereld en een verteltempo dat zijn weerga niet kent. Samantha Shannon (1991) groeide op in Londen, waar ze op haar vijftiende begon met schrijven. Deze zomer is ze afgestudeerd in de Engelse taal en literatuur aan het St Annes College in Oxford. Shannon wordt de nieuwe J.K. Rowling genoemd. Het bottenseizoen is het eerste boek uit een serie.
